

Just the Facts

WYNN HOSPITAL

Each week, "Just the Facts" provides information about a key aspect of the Wynn Hospital being built by Mohawk Valley Health System (MVHS). It is designed to keep our medical staff, employees and volunteers updated and to share with family, friends and neighbors so we keep our community informed about how we're transforming healthcare in our region.

TOPIC FOR TUESDAY, MAY 30, 2023:

Wynn Hospital Generator Has Arrived

Electrical disruptions can have a significant impact on hospitals and healthcare facilities as they require constant power to support patients with continuous needs and chronic health conditions. In addition, power outages often occur during natural disasters which can increase the demand for medical attention.

In order to ensure our facilities have consistent power, we rely on backup power systems that include generators, paralleling switchgear and transfer switches. These systems are designed to provide power within seconds of a power outage and supply the hospital's electrical needs until utility power is restored.

The Wynn Hospital generators was our last long lead item (items that require a longer lead time for ordering and delivery due to their complexity or because they are built to order) for the project. I'm pleased to say that the first generator arrived last week, and the second is anticipated to arrive within the next few weeks. It is not only great news to check off our last long lead item, but we now have the ability to provide backup power to the Wynn Hospital should the need arise.
