

# Just the Facts

WYNN HOSPITAL

Each week, "Just the Facts" provides information about a key aspect of the Wynn Hospital being built by Mohawk Valley Health System (MVHS). It is designed to keep our medical staff, employees and volunteers updated and to share with family, friends and neighbors so we keep our community informed about how we're transforming healthcare in our region.

## TOPIC FOR TUESDAY, AUGUST 8, 2023:

### *Electrostatic Dissipative Flooring*

Electrostatic Dissipative (ESD) flooring, or static control resistant flooring, is flooring that is grounded to dissipate or neutralize electrostatic discharges. ESD flooring is created from a combination of materials, including carbon fibers that transfer the electrostatic charge from a person to the flooring. This reduces the chance of someone creating a static discharge through physical contact. This flooring protects electronics from damage caused by static electricity that accumulates from traffic and is being installed in the MRI room.

The new MRI for the Wynn Hospital is being delivered this Friday! Stay tuned for pictures.
